

Edoardo Galli

Computer Science student

Bologna, Italy | edoski.dev@gmail.com | edoski.com | github.com/edoski | [LinkedIn](#)

Profile

Computer Science student at the University of Bologna, completing a B.Sc. in Information Science for Management and starting the M.Sc. in Artificial Intelligence in September 2026. Native English and Italian speaker. Focused on deep learning, AI systems, and typed, reproducible software for data-intensive workflows.

Education

M.Sc. Artificial Intelligence University of Bologna	Starts Sep 2026
B.Sc. Information Science for Management University of Bologna	2021–2026 GPA 28/30
International Baccalaureate Diploma International School of Bologna	2017–2021 Bilingual Diploma

Selected Projects

spice Temporal fee-decision deep learning pipeline Python, PyTorch, Optuna, Polars, Pydantic, web3.py - Built an end-to-end thesis pipeline that turns EVM block history into temporal supervised learning datasets. - Compared LSTM, Transformer, and hybrid model families through reproducible Optuna-driven experiments.	Repository
journal Personal analytics journal pipeline Python, Pydantic, pytest, Obsidian - Built an automation system syncing Flow focus data, goals, reminders, and daily metrics into Obsidian. - Used typed contracts and protocol ports to keep external integrations explicit and testable.	Repository
sweng-notes Real-time collaborative note editor Next.js, React, TypeScript, Tailwind CSS, Liveblocks, Convex - Delivered a shared writing workspace with live presence and typed React surfaces. - Separated durable Convex document state from Liveblocks collaboration state.	Repository
stackoverflow-survey-2025-analysis AI trust analysis from the Stack Overflow 2025 Developer Survey Python, scikit-learn, pandas, statsmodels, seaborn - Modelled developer trust in AI tools with leakage-safe survey preprocessing. - Trained interpretable logistic regression and SVM baselines with GridSearchCV.	Repository

Technical Skills

Languages	Python, TypeScript, Java, SQL, PHP
AI / ML	PyTorch, scikit-learn, Optuna, pandas, Polars, statsmodels
Data / Backend	Pydantic, web3.py, Convex, MySQL, MongoDB, REST, sockets
Frontend	Next.js, React, Tailwind CSS, shadcn/ui
Tools	Git, Docker, pytest, Bash, Obsidian, Vercel
